

TOYOTA J40 — DASHBOARD CENTRE PANEL COMPONENT PACKAGE

DIMENSIONAL CONTROL D1 · A1 LANDSCAPE · SCALE 1:1 WHEN PRINTED AT 100% / ACTUAL SIZE

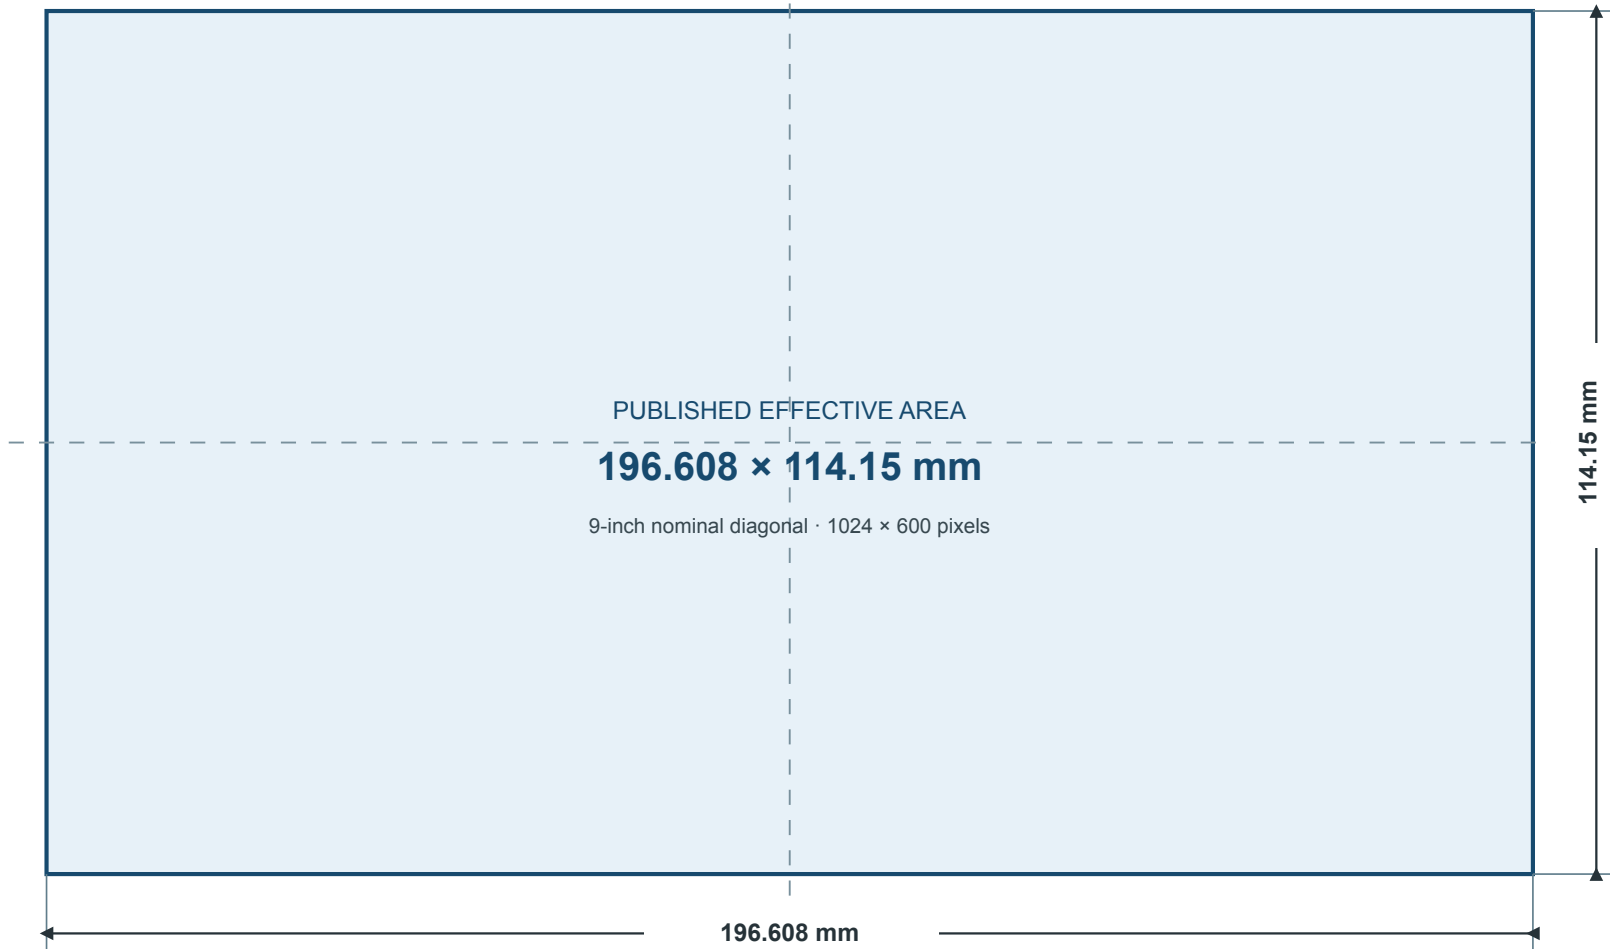

A · PIONEER DMH-AP6650BT — NOSE / FRONT ENVELOPE

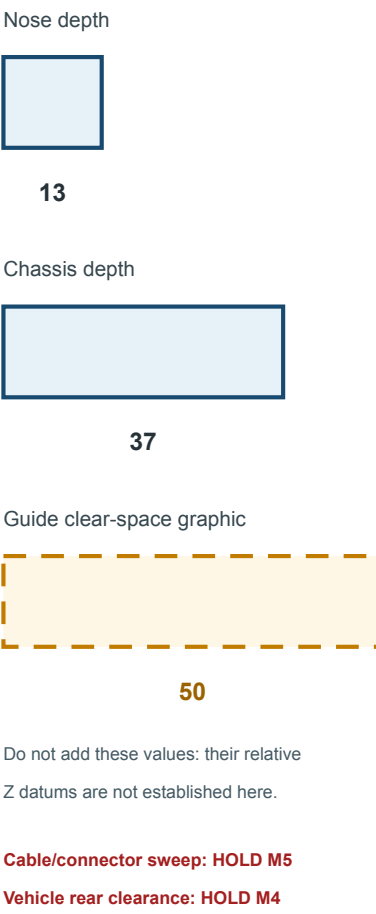

B · RECEIVER CHASSIS ENVELOPE

C · EFFECTIVE DISPLAY AREA — NOT LOCATED RELATIVE TO NOSE

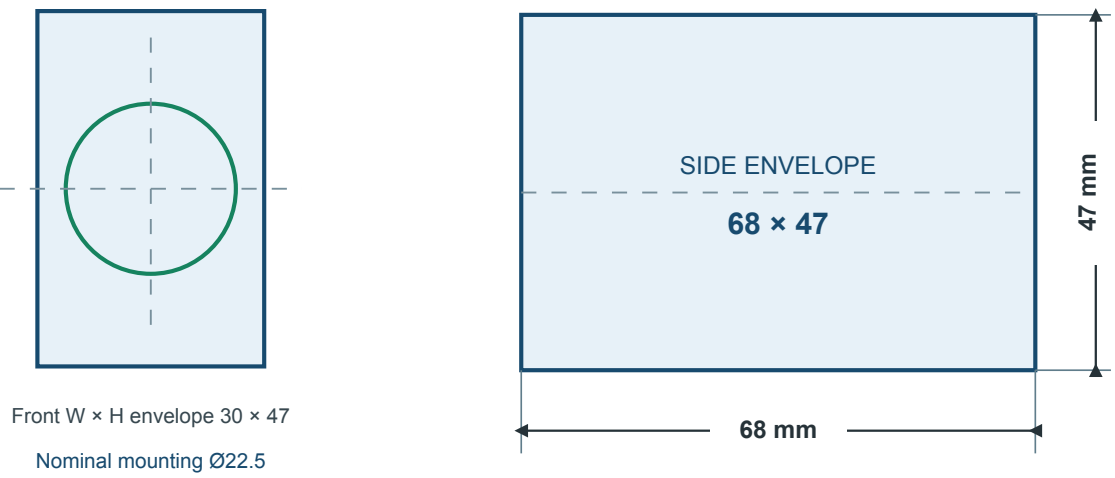

D · DEPTH REFERENCES

E · SCHNEIDER XB4BD21 (QTY 4)

2-position maintained selector · 1NO

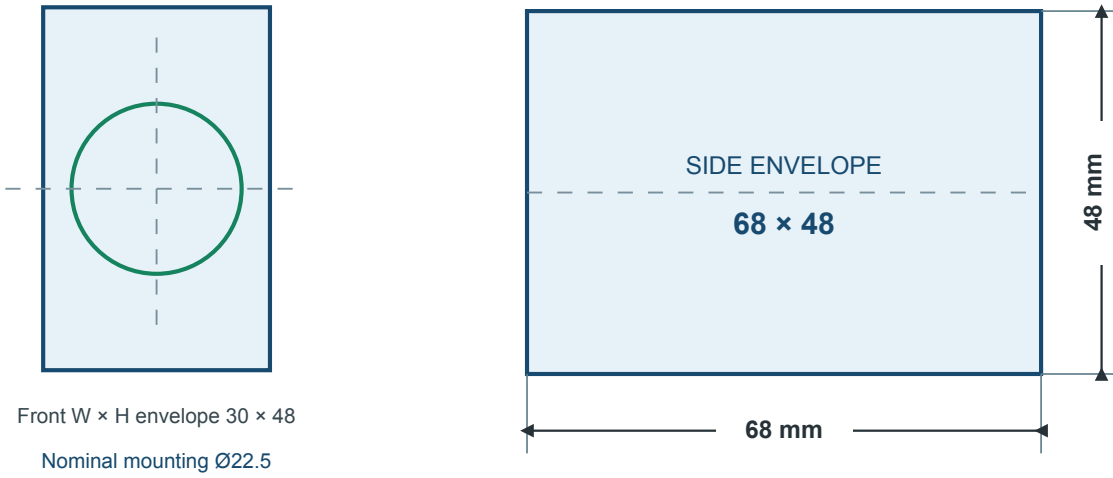

Production boreform and anti-rotation detail: verify received switch + coupon.

Published overall envelope H × W × D: 47 × 30 × 68 mm.

Published mounting diameter: 22.5 mm.

F · SCHNEIDER XB4BJ33 (QTY 3)

3-position maintained selector · long handle · 2NO

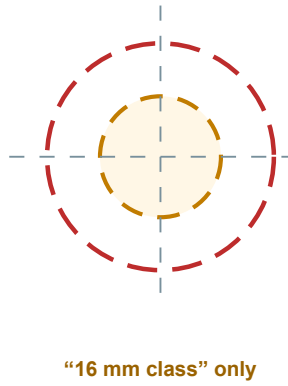

Production boreform and anti-rotation detail: verify received switch + coupon.

Published overall envelope H × W × D: 48 × 30 × 68 mm.

Published mounting diameter: 22.5 mm.

G · RED HAZARD BUTTON (QTY 1)

Generic latching, illuminated, 12 V; no confirmed SKU

M6 REQUIRED:

- actual mounting bore and any flatnotch
- bezel diameter and projection
- body depth, terminal and wire sweep
- panel-thickness / nut engagement range

H · DIMENSIONS THAT CANNOT BE RECOVERED EXACTLY FROM PHOTOS

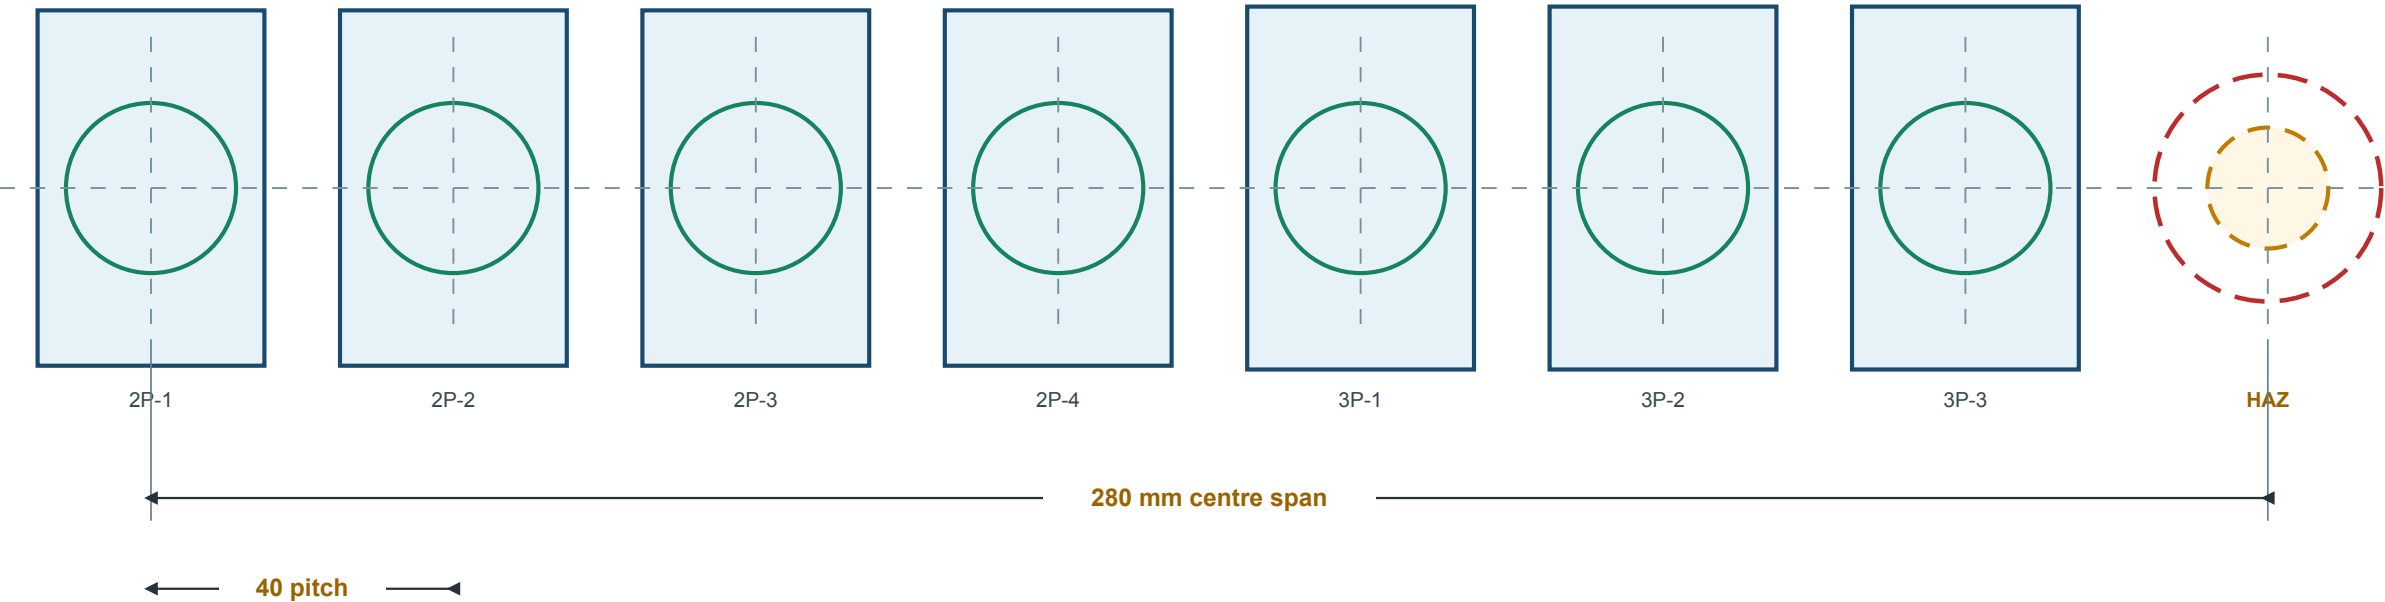

Gate	Required physical measurement	Status
M1	Dashboard datum, opening, surviving flange and attachment coordinates	HOLD
M2	Glovebox-side seam, centre boundary, top radii, factory bottom line	HOLD
M3	Speedometer/column boundary, axis and swept clearances	HOLD
M4/5	Pioneer outline, radii, screw centres, connectors and site depth map	HOLD
M6	All received-control bores, bezels, depth and anti-rotation features	HOLD
M7	Outer outlet parts + site depth (outside this centre insert)	HOLD
M8	HVAC case, fittings and supported duct branches	HOLD
M9	Panel stack, fasteners and full-depth in-vehicle buck	HOLD

NO PANEL PERIMETER, SCREEN APERTURE OR MOUNTING HOLES ARE RELEASED FOR CUTTING ON D1.

Photographs control appearance and adjacency only: they contain no paired perpendicular scale datums.

J · 1:1 CONTROL-BANK PACKAGING STUDY — ARRANGEMENT ONLY

40 mm centre pitch is inherited from the quotation mock-up and is NOT a production dimension.

DO NOT TRANSFER THESE CENTRES TO THE PANEL UNTIL M1–M9 ARE CLOSED.

Front envelope of seven Schneider selectors:

4 × 30×47 + 3 × 30×48 mm envelopes

Nominal selector mounting:

7 × Ø22.5 mm published diameter

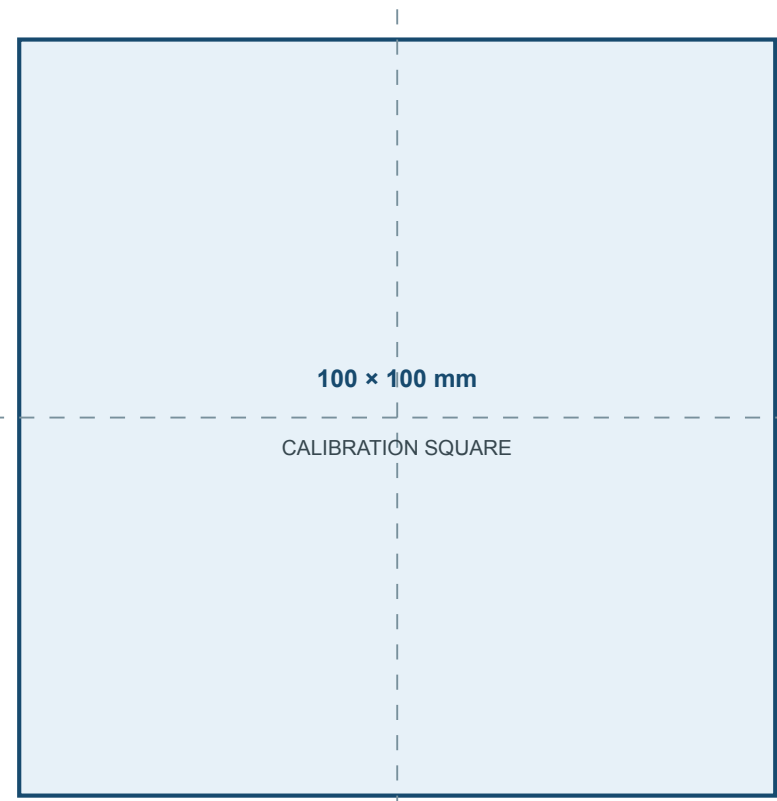

Hazard:

all production dimensions HOLD M6

This row tests visual/hand clearance only.

Final pitch depends on bezel clearance, labels, wiring, panel edges and tool access.

K · PRINT / MEASUREMENT CONTROL

- Print/export at 100% / actual size.
 - Disable "fit to page".
 - Measure this square in both axes.
 - Reject if either axis differs by >0.25 mm.
- Use a steel rule for the page check;
- use calipers / profile trace for parts.
- THIS IS NOT A CNC CUT FILE.
- Published rectangles are bounding boxes,
- not inferred corner profiles.
- Create the production panel only after the
- dimension schedule is signed off.

GENERAL NOTES

- All dimensions are millimetres. Do not scale from on-screen display. 2. "Exact" on D1 means copied from the named manufacturer source; not tolerance-certified metrology.
- Pioneer effective display area is intentionally separate from the nose envelope; published documentation does not locate it from the external edges. 4. Nose and chassis depth are not summed.
- Dashboard photographs are visual references only. The retained glovebox, speedometer, factory top line and factory straight bottom line must be traced directly before any panel perimeter is drawn.

J40 DASHBOARD CENTRE INSERT

Component/package dimensional control — not production release
